

Maryland Green Registry

2019 Leadership Award Winner Inn at Horn Point

About the Inn at Horn Point

Located in Annapolis' historic Maritime District, the Inn at Horn Point is a family-owned and operated bed and breakfast. The home was built in approximately 1902 and features five guest rooms.

Achievements

Waste Reduction: The Inn sends less than one 40-gallon container of waste to the landfill every 4-6 weeks and recycles and composts all other appropriate materials. This is accomplished by using reusable containers, dishware, glassware and cutlery, cloth napkins and tablecloths; purchasing condiments and other items in bulk; and donating used soap to be re-purposed for use in third-world countries.

Electric Vehicle (EV) Recharging: The Inn has installed 3 EV charging stations and makes them available to both the general public as well as to guests of the Inn. Information about the charging stations is communicated to Inn guests prior to their arrival as both a promotional effort and to help educate the public on the benefits of green travel and the ease and convenience of alternative fuel vehicles. The chargers and the property are powered through wind energy renewable energy credits (RECs).

Stormwater Management and Landscaping: The Inn uses two rain barrels to capture rainwater and uses it to water plants. BayScaping techniques, including a rain garden, pervious pavement and French drains, are used to prevent rapid run off of stormwater.

The Maryland Green Registry Leadership Awards recognize organizations that have shown a strong commitment to the implementation of sustainable practices, the demonstration of measurable results, and the continual improvement of environmental performance.
