

HAND DELIVERED

February 27, 2023

Kleinfelder Project No.: 20193011.001A

Mr. Christopher Ralston
Maryland Department of the Environment
1800 Washington Boulevard
Baltimore, Maryland 21230

SUBJECT: SAMPLING REDUCTION, WELL ABANDONMENT, AND ADDITIONAL CYCLING WORK PLAN
Inactive Exxon Facility #28077
14258 Jarrettsville Pike, Phoenix, Maryland
MDE Case No. 2006-0303-BA2

Dear Mr. Ralston:

Kleinfelder Inc. (Kleinfelder), on behalf of ExxonMobil Environmental & Property Solutions (ExxonMobil), is submitting this *Sampling Reduction, Well Abandonment, and Additional Cycling Work Plan* (Workplan) to the Maryland Department of the Environment (MDE) Oil Control Program for Inactive Exxon Facility #28077 (Case Number 2006-0303-BA2). Workplan objectives include: (i) alignment of the groundwater sampling programs (both monitoring wells (MWs) and private supply wells (PWs)) with current aquifer conditions, (ii) abandoning MWs where no longer needed and establishing a monitoring well network in-line with current project scale and needs, and (iii) extending the groundwater recovery cycling assessment program.

1.0 Background

On behalf of ExxonMobil, Kleinfelder submitted the January 24, 2023 *Recovery Well Cycling Report of Results* which details recovery well cycling activities and monitoring results, which started on March 11, 2022, and included shutdown of the recovery well network for a total of 7.5 months over an approximate 9-month period, with three system-off cycles of approximately 11-week, 19-week, and 2-week durations, interspersed with two system-on cycles with recovery wells reactivated on 2-week and 4-week durations, respectively.

During the cycling assessment, dissolved phase petroleum constituent concentrations in the vast majority of monitoring wells remained below action levels and consistent with pre-cycling concentrations. In many of the 14 deactivated recovery wells, dissolved phase concentrations continued to improve below action levels. Thus, only three recovery wells were restarted after the second off-cycle with MDE's approval.

Over the last several years, one far down-gradient supply well (3627A Southside Ave) has demonstrated extended periods above and below the MDE action level for methyl tert-butyl ether (MTBE). This supply well demonstrated the same fluctuations during cycling activities although mostly below the action level. In summary, the cycling assessment demonstrated groundwater conditions did not worsen with the

remediation system off, and in many cases continued to improve. The cycling assessment has provided the data-based rationale to support: (i) continued recovery well cycling to further evaluate the benefit of groundwater recovery from a limited number of wells with recalcitrant concentrations, (ii) where ongoing monitoring well and supply well sampling is warranted to ensure the groundwater supply is protected during both recovery well cycling and post-remedial monitoring, and (iii) where groundwater monitoring is no longer necessary.

2.0 Cycling Assessment – 2nd Phase

In March 2022, at the start of the Recovery Well Cycling Assessment, 14 recovery wells were deactivated. The cycling assessment concluded in December 2022 with three RWs (MW-187A and MW-187C in the intersection, and MW-178C on 3501 Hampshire Glen Court) being re-activated to focus recovery on wells that exhibited recalcitrant concentrations through much of the cycling assessment. After further review of the data, which indicated rebound above action levels for MTBE in MW-38C (14311 Jarrettsville Pike) and MW-54B (14307 Jarrettsville Pike) and for benzene in MW-54B, Kleinfelder and ExxonMobil discussed the findings with the MDE on January 5, 2023 and received verbal approval to resume pumping also from MW-54B, which was re-activated on January 10, 2023.

In a January 9, 2023 email to the MDE (**Attachment A**), Kleinfelder proposed continuing the cycling assessment within the reduced area of remaining recalcitrant groundwater concentrations, including the following:

- add recovery pumps to MW-54B and MW-38C
- remove the pump from MW-178C and convert to an immediate downgradient (from active recovery) monitoring point
- continue groundwater recovery from intersection wells MW-187A and MW-187C
- cycle the four RWs ON for one month and OFF for one month twice
- collect monthly groundwater samples from the following wells (listed in progressive downgradient order) - MW-187A, MW-187B, MW-187C, MW-54B, MW-38C, MW-178C; sample other wells as currently directed by MDE
- provide the MDE monthly updates via email including a figure, summary table, and analytical reports, and
- review cycling results with MDE after data is compiled following the second OFF cycle.

The MDE approved the proposed continuation of the cycling assessment (Phase 2) in an email on January 20, 2023 (**Attachment A**). On January 27, 2023 the pump was removed from MW-178C and a pump was re-activated in MW-38C, initiating the 1-month on-cycle. The MDE was notified of this change by email. This second phase of recovery well cycling is focused on the remaining area of recalcitrant dissolved phase concentrations within the intersection and adjacent properties to the northeast. Analytical results from the Phase 2 cycling will be compared to prior groundwater trends to evaluate the potential benefit of continued groundwater recovery. **Figure 1** shows the recovery wells and proximal wells included in Phase 2 of the cycling assessment.

The table below summarizes the MDE-approved additional cycling assessment activities and the related schedule:

Approximate Date	Work Scope	System Status
January 27, 2023	Remove pump from MW-178C and begin pumping from MW-38C. Start of 1-month on-cycle with MW-38C, MW-54B, MW-187A, MW-187C active.	On
Week of Feb 20, 2023	Collect Round 1 groundwater samples from 4 on-cycle recovery wells and 2 proximal monitoring wells.	
February 27, 2023	Shut down system, begin 1-month off-cycle.	Off
Week of March 20, 2023	Collect Round 2 groundwater samples from 4 off-cycle recovery wells and 2 proximal monitoring wells.	
March 27, 2023	Restart system, begin 2nd 1-month on-cycle.	On
Week of April 24, 2023	Collect Round 3 groundwater samples from 4 on-cycle recovery wells and 2 proximal monitoring wells.	
April 27, 2023	Shut down system, begin 2 nd 1-month off-cycle.	Off
Week of May 22, 2023	Collect round 4 groundwater samples from 4 off-cycle recovery wells and 2 proximal monitoring wells.	
May 30, 2023	Restart system. Upon receipt of round 4 groundwater samples meet with MDE to review results and prepare report of results.	On

3.0 Proposed Monitoring Well Sampling, Gauging, and Well Retention

There are currently 187 monitoring wells (MWs) remaining in the project area, including 119 MWs sampled - 6 monthly (during Phase 2 Cycling Assessment), 54 quarterly, and 59 semi-annually. Plus, there are 68 wells which are either gauge-only or have been retained for potential future monitoring. **Table 1** provides a list of the remaining 187 wells including: (i) current status/activity, (ii) proposed status/activity, (iii) sampling frequency, (iv) sampling method, (v) location in the project area, and (vi) number of years since the last date of a detection above an MDE standard. The distribution of currently sampled wells is shown on **Figure 2**. Well construction details are provided in **Attachment B**.

The magnitude and extent of dissolved phase gasoline constituents is well characterized and has been closely studied and monitored for over 17 years. Over this time, the number of active recovery wells has decreased from a high of 87 operating simultaneously, to the current 4 RWs. During the 2022 Cycling Assessment, there was over seven months of no recovery activity for the cycling assessment as summarized above. Thus, the groundwater characterization is not only based on trends from when wide-spread remedial action was occurring, but also reflects limited and no active remediation with conditions continuing to improve.

At the end of 2022, of the 187 remaining wells, only 8 MWs had petroleum constituent concentrations above MDE standards with only one of these on the former station property. Remaining impacted groundwater is isolated to the near-Northeast (NE) area (intersection to 3501 Hampshire Glen) and MW-189D. Thus, most of the groundwater data collected from the current monitoring network (187 MWs) is no longer needed to evaluate and monitor: (i) continued decreasing trends, (ii) the second phase of cycling assessment, nor (iii) post-remedial monitoring. The eight remaining MWs with impacted groundwater above MDE action levels plus other surrounding MWs are proposed to be maintained for sampling as detailed below.

As mentioned above and based on the most recent groundwater sampling results (second half of 2022), for the 119 currently sampled MWs, only 8 MWs had detections of petroleum hydrocarbon constituents above an MDE drinking water action level (MDE standards). This compares to 16 MWs at the beginning of

2022. The last 10 years of monitoring well analytical data is provided in **Table 2**. The full historical dataset was provided on CD as part of the recently submitted *Fourth Quarter 2022 Groundwater Monitoring and Remedial Status Report* (February 15, 2023).

Substantial remediation progress has been made since the last groundwater sampling reduction approved by MDE over 2.5 years ago (June 25, 2020), including (i) the 2022 recovery well cycling assessment with 7.5 months with the system offline, (ii) further reduction of the number of active RWs from 14 to 4, and (iii) continued reduction in groundwater concentrations as indicated by the reduction in the number of wells above MDE standards from 20 MWs to 8 MWs.

As outlined in the June 2018 *Order of Resolution Flowchart 2: Discontinuation of Sampling / Gauging and Abandonment of a Monitoring Well (Attachment C)*, the first criteria to evaluate removing a monitoring well from the monitoring program is whether concentrations have been below MDE standards for gasoline constituents for 1 year. Of the 187 remaining MWs, there are currently 172 MWs which have been below MDE standards for longer than 1 year, including (i) many wells with multi-year periods of repeated non-detect concentrations, and (ii) 169 of the 172 sampled MWs with multi-year periods below MDE standards. Of the 172 wells that meet this 1-year requirement, several are proposed for continued groundwater monitoring to evaluate RW cycling and for post-remedial monitoring. However, 150 of the 172 wells are no longer needed to monitor aquifer conditions and are therefore proposed to be abandoned (further details are provided below).

The table below summarizes the proposed changes to the groundwater monitoring program and well abandonments. The distribution of the proposed MW sampling frequency is presented on **Table 3** and **Figure 3**.

Summary of Current and Proposed Monitoring Activities and Well Abandonments

	Current Totals	EM Proposed Totals
Existing Monitoring Wells	187	37
Sampled	119	33
- Monthly Sampling (during cycling, then quarterly)	6	6
- Quarterly Sampling	54	16
- Semi-Annual Sampling	59	0
- Annual Sampling	0	11
Gauge Only	21	0
Inactive Status – Retain	47	4
Abandoned Wells	122	272
Total Wells	309	309

Details and rationale for the proposed groundwater monitoring program changes are provided in the sections below, including:

- sampling method,
- sampling frequencies (including discussion by project area),
- groundwater gauging,
- MW abandonment, and
- retained MWs.

3.1 Groundwater Sampling Method

Groundwater sampling methodology is proposed to remain consistent with current methodology, as shown in **Table 1**, except for one proposed change in sampling method. Well MW-138D is sampled quarterly with 10 hydrasleeve depths/intervals. Data from the historical discrete depth sampling for MW-138D and other wells with discrete depth sampling data from across the project area over the last 17 years indicates no significant, persistent concentration variability with depth. The number of hydrasleeve intervals for MW-138D is proposed to be reduced from 10 intervals to 3 intervals - shallow (115 to 120), intermediate (230 to 235), and deep (350 to 355).

3.2 Groundwater Sampling Frequency

3.2.1 Proposed Sampling By Frequency

Monthly: as previously outlined in Section 2.0, 6 wells are proposed for monthly groundwater monitoring during recovery well cycling activities. These 6 wells will revert to quarterly at the conclusion of the Phase 2 cycling program. These include the four actively cycled recovery wells (MW-187A, MW-187C, MW-54B, and MW-38C), plus the intermediate depth intersection well MW-187B, and MW-178C which is downgradient of the cycling area. Monthly monitoring of these wells during cycling will allow for direct evaluation of cycling effects (e.g. concentration trends and groundwater elevation changes) within the cycling wells and immediate vicinity.

Quarterly: 16 wells are proposed for quarterly sampling and gauging, in addition to the 6 monthly wells that will revert to quarterly at the end of the 4-month cycling program, for a total of 22 quarterly sampled wells. These 16 wells include: (i) recently converted recovery wells, (ii) wells in proximity to and downgradient of active recovery, and (iii) wells which have been above MDE standards within the last year. The proposed quarterly wells comprise shallow, intermediate, and deep wells, and spans an area from southwest of the former station property to 3605A Southside Avenue to the northeast.

Annual: 11 wells are proposed for annual sampling and gauging, including: (i) wells below MDE standards for at least one year, (ii) wells generally located outside the remaining focus area of active groundwater recovery, (iii) wells proposed to supplement the quarterly and monthly data set for post-remedial monitoring, and (iv) wells required for the annual potentiometric surface maps, as discussed further below.

Combined Proposed Sampling Frequencies: taken together, the proposed monthly, quarterly, and annual sampling provides a monitoring program that is “fit for purpose” given the magnitude and extent of remaining groundwater impacts above MDE standards, which was reduced and confirmed during the 2022 cycling assessment which included 7.5 months without system operation, during which the plume continued to contract. The monthly sampling is for evaluation of the ongoing cycling assessment, quarterly sampling is focused on areas with recent action level exceedances and downgradient, and annual sampling supplements these to provide a broader snapshot across the remaining project focus area of wells that have been compliant with action levels for a year or longer.

3.2.2 Proposed Sampling by Project Area

Southwest of the Former Station Property

Southwest of the former station property, remediation has been complete for over 7 years. There have been no detections of gasoline constituents above MDE standards to the southwest of the former station property for >5 years except for MW-40. Historical analytical data for MW-40 indicate concentrations periodically (12/10/2017, 10/9/2019, 11/29/2022) exceed MDE standards followed by long periods (years) without detections (**Table 2**).

There are currently 10 MWs sampled southwest of the former station property – one quarterly (MW-40) and nine semi-annually (**Table 1**). All nine semi-annually sampled wells have been below MDE standards for 5 or more years, most for over 10 years. Continued quarterly sampling of MW-40 and annual sampling of MW-72 (down-gradient of MW-40) is proposed in the southwest area of the project (**Table 3**).

Former Station Property

There is no on-going remediation on the former station property. At the end of 2022, there was only one MW in the source area with petroleum constituent concentrations above MDE standards (MW-139 with MTBE at 31 ug/L on December 5, 2022, **Table 2**). Well MW-139 has had fluctuating detections of MTBE above and below MDE standards over the last three years. There is only one other well on the former station property with detections of gasoline constituents in the last year above MDE standards (SVE-1 on 4/27/2022). The extensive remediation history has reduced concentrations below MDE standards in all other remaining wells on the former station property.

There are currently 34 MWs sampled on the former station property – 21 quarterly and 13 semi-annually (**Table 1**). All but 2 (MW-139, SVE-1) of the 34 sampled MWs on the former station property have been below MDE standards for more than one year and all but 4 (MW-139, SVE-1, MW-3 and MW-16R) have been below MDE standards for more than two years. Ten MWs are proposed for continued post-remedial sampling on the former station property – 4 quarterly and 6 annually (**Table 3**).

Northeast of the Former Station Property

Current remediation northeast of the former station property includes a second phase of recovery well cycling assessment from four wells:

- two of the intersection wells (MW-187A and MW-187C)
- one well on 14307 Jarrettsville Pike (MW-54B)
- one well on 14311 Jarrettsville Pike (MW-38C)

These four wells have had recent detections of gasoline constituents above MDE standards as well as three other wells – MW54C, MW-178C and MW-189D.

There are currently 75 MWs sampled in the northeast area of the project – 38 quarterly and 37 semi-annually (**Table 1**). All but 12 of the 75 sampled MWs in the northeast area have been below MDE standards for more than one year and all but 13 have been below MDE standards for more than two years. Twenty-one MWs are proposed for continued post-remedial sampling in the northeast area – 6 monthly (while cycling assessment continues), 11 quarterly, and 4 annually (**Table 3**). The 6 wells proposed for monthly sampling will revert to a quarterly frequency following the cycling assessment.

3.3 Groundwater Gauging

The 33 monitoring wells proposed to be sampled monthly, quarterly, or annually will be gauged prior to each sampling event and gauging data will be tabulated and reported in the quarterly RAPRs. In addition, an annual potentiometric surface map will be prepared following the annual sampling event and presented in the corresponding RAPR.

Potentiometric surface maps have been generated for 17 years based on gauging data from shallow, non-pumping wells and have been generally consistent quarter to quarter (e.g. no seasonal variations evident), and over the last several years as recovery wells have been converted to monitoring wells, including when no recovery was being conducted during the cycling assessment. Especially in recent years since total groundwater recovery rates have often been less than 1 gallon per minute spread across several wells,

changes in potentiometric surface are localized to the recovery wells and have not yielded discernable changes in the area-wide potentiometric surface and flow directions. Therefore broader, area-wide gauging and quarterly potentiometric surface map generation is not necessary.

3.4 Monitoring Well Abandonment

A total of 150 wells are proposed for abandonment, all of which meet the criteria for proposing well abandonment in Flowchart 2 (June 2018 *Order of Resolution – Attachment C*); they have all been below MDE standards for at least 2 years and 44 of the wells have never exceeded MDE standards, including during the 2022 cycling assessment, when the remediation system was offline for a total of 7.5 months and the extent of dissolved phase impacts continued to contract. These wells are also not necessary for post-remedial monitoring or groundwater gauging / potentiometric surface evaluation as data from these wells are considered redundant.

3.5 Retained Wells

Four wells are proposed to be retained, though they will not be gauged or sampled as part of the monitoring program described above:

- MW-67 – located in the SW area directly down-gradient of MW-72 (proposed annual sampling); this well is proposed to be retained for sampling in the unlikely event both MW-40 and MW-72 demonstrate persistent impact above MDE standards.
- MW-166C - located on 3418 Sweet Air Road; this is an out-of-service private supply well.
- PW-3501 – located on 3501 Hampshire Glen Court; this is also an out-of-service private supply well.
- PW-14311 – located on 14311 Jarrettsville Pike; this is also an out-of-service private supply well

4.0 Proposed Private Supply Well Sampling

Private water supply wells on 28 properties are currently being sampled on various frequencies - two monthly, 11 quarterly, and 15 semi-annually (when property owners permit). A list of these properties is provided in **Table 4** including property address, lot ID, sample frequency, and last sample date. **Figure 4** shows the distribution of the 28 sampled properties across the project area and proposed sampling frequencies.

The last reduction in supply well sampling was approved by the MDE in a letter dated January 25, 2021. At that time only one well (at 3627A Southside Road) had detections of petroleum hydrocarbon constituents (MTBE only) above MDE standards. Two years later, only one well (the same property) currently has MTBE concentrations above MDE standards. Over the last two years, this well has had multiple extended multi-month periods with MTBE below MDE’s drinking water standard for MTBE. The historical analytical results for the 28 currently sampled supply wells are provided in **Table 5**.

Of the 28 currently sampled properties, 24 are proposed to be discontinued based on the following criteria:

- Consistent with the 2018 Court Order Flowchart 3 (**Attachment C**) concerning Private Supply Well Sampling, the 24 supply wells proposed for discontinuing sampling have had no detections of petroleum hydrocarbon constituents above MDE’s drinking water standards for over 2 years .
- Even further back, the 24 supply wells proposed for discontinuing sampling have not had detections of petroleum hydrocarbon constituents above half of MDE’s drinking water standards for over 10 years, including during the 2022 recovery well cycling assessment (**Table 5**).

- There is no ExxonMobil owned or managed Point of Entry Treatment system on any of the 24 properties proposed for discontinued supply well sampling.
- There is no proposed on-going remediation on any of the 24 properties proposed for discontinued supply well sampling.
- Continued monitoring well sampling is proposed on 7 of the 24 properties proposed for discontinued supply well sampling.

The supply wells on the following four properties are proposed for continued sampling:

- 3627A Southside Avenue – monthly – concentrations demonstrate long periods both above and below the MDE standard for MTBE;
- 3625 Southside Avenue – quarterly – adjacent and downgradient to the above property – concentrations have always been less than half the MDE standard for MTBE;
- 14307 Jarrettsville Pike – quarterly – NE of intersection and proximal to nearby monitoring wells with recalcitrant concentrations and ongoing recovery well cycling; this supply well last had detection of MTBE above the MDE standard on 5/10/2011; and
- 3506 Hampshire Glen Court – quarterly - in-use supply well in NE, downgradient of recalcitrant concentrations and ongoing recovery well cycling; this supply well last had detection of MTBE above the MDE standard on 5/18/2009.

5.0 Workplan Summary

This Workplan proposes several changes to the remediation and monitoring programs to optimize ongoing activities at the site, based on the remediation progress over the past 17 years, as supported by data detailed herein, including data from last year when the system was offline for over 7 months for the cycling assessment. The proposed changes and activities are summarized below:

Phase 2 Cycling Assessment

The MDE approved continuation of the cycling assessment (Phase 2) in an email on January 20, 2023. This work includes:

- Groundwater recovery from 4 wells for 1 month on, one month off through two cycles for a total of approximately 4 months;
- Monthly sampling of 6 wells – the 4 recovery wells plus 2 others; and
- Providing the MDE with: (i) monthly updates via email including a figure, summary table, and analytical reports and (ii) a Phase 2 cycling results conference call once the related data is compiled following the second OFF cycle.

Monitoring Well Sampling

Of the 187 remaining MWs, there are currently 172 MWs which have been below MDE standards for more than 1 year. Groundwater monitoring during the 2022 Cycling Assessment confirmed where recalcitrant concentrations remain that warrant continued monitoring, and other locations where post-remediation monitoring is warranted due to recent remediation cessation or proximity to recent concentration fluctuations above action levels. Therefore a focused groundwater monitoring program is proposed which includes:

- Following the monthly sampling frequency of 6 wells during the Phase 2 Cycling Assessment, these wells will revert to MDE's approved sampling frequency;
- Quarterly sampling of 16 wells, located on the former station and properties to the southwest and northeast;

- Annual sampling of 11 wells located on the former station and properties to the southwest and northeast; and
- Retaining 4 wells, including 1 monitoring well to the southwest of the former station, and 3 inactive supply wells to the northeast of the former station.

Taken together, the proposed monthly, quarterly, and annual sampling provides a monitoring program that is robust and “fit for purpose” given the reduced magnitude and extent of remaining groundwater impacts above MDE standards.

Additional changes to the groundwater monitoring program include:

- The number of hydrasleeve intervals for MW-138D is proposed to be reduced from 10 intervals to 3 intervals - shallow (115 to 120 feet), intermediate (230 to 235 feet), and deep (350 to 355 feet).
- The 33 monitoring wells proposed for monthly, quarterly, or annually sampling will be gauged prior to sampling and gauging data will be tabulated and reported in the quarterly RAPRs consistent with current practice. An annual potentiometric surface map will be prepared following the annual fourth quarter sampling event and presented in the corresponding RAPR.

Well Abandonment

There are 150 wells proposed for abandonment, all of which meet the criteria for proposing well abandonment in Flowchart 2, including concentrations below MDE standards for at least 2 years (June 2018 *Order of Resolution, Attachment C*). Of the 150 MWs proposed for abandonment, 44 of the wells have never exceeded MDE standards.

Private Supply Well Sampling

Currently 28 private supply wells on 28 properties are sampled. There are 24 supply wells which have had no detections above half MDE’s MTBE standard in the last ten years, that are proposed to discontinue sampling consistent with the 2018 *Court Order Flowchart 3*. The supply wells on the following four properties are proposed for continued sampling: 3627A Southside Avenue (monthly); 3625 Southside Avenue (quarterly); 14307 Jarrettsville Pike (quarterly); and 3506 Hampshire Glen Court (quarterly).

6.0 Schedule

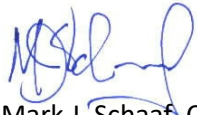

The second phase of recovery well cycling was initiated on January 27, 2023 and will continue through approximately May 30, 2023. MDE will be provided monthly data updates throughout the cycling program, and a meeting will be scheduled with the MDE to review the Phase 2 Cycling Assessment upon receipt of the Round 4 cycling sampling results in early June 2023. Also, a Report of Results will be prepared for MDE submittal. In addition to the 6 wells sampled monthly during the recovery well cycling, monitoring well and private supply well sampling in the first quarter 2023 will continue according to the current MDE-approved sampling program. Based on the 60-day review timeframe, we anticipate MDE’s review and response to this Workplan before the end of April 2023, therefore second quarter 2023 sampling will be conducted based on MDE’s response.

LIMITATIONS

Kleinfelder performed the services for this project under the Enabling Agreement with Procurement, a division of ExxonMobil Global Services Company (signed on November 28, 2012). Kleinfelder states that the services provided are consistent with professional of care defined as that level of services provided by similar professionals under like circumstances. This report is based on the regulatory standards in effect on the date of the report. It has been produced for the primary benefit of ExxonMobil Global Services Company and its affiliates.

186	SVE- 2	14258 Jarrettsville Pike	FS	Quarterly	P/G	Annual	Below standards >3 yrs (2/1/2019)	3
187	SVE- 3	14258 Jarrettsville Pike	FS	Quarterly	P/G	Annual	Below standards >3 yrs (11/6/2019)	3

* = monthly sampling during Phase 2 cycling assessment; thereafter reverts to quarterly frequency

FS = Former Station Property

SW = Southwest Project Area

NE = Northeast Project Area

P/G = Purge and Grab

P/G* = Purge and Grab when RW; H/S when not RW

H/S = HydraSleeve® discrete depth sampler

[R] = Recovery Well

N = Never a detection above MDE Standards

C> = Currently Above MDE Standards

<1 = <1 Year Below MDE Standards

Notes:

- Indicates the well was used for remediation at the time of reporting.

µg/L - micrograms per liter

AP - above packer

BP - below packer

BRL - Below laboratory reporting limits

BTEX - Benzene, toluene, ethylbenzene, and total xylenes

DIPE - di-isopropyl ether

E - Value exceeds calibration range

ETBE - ethyl tert butyl ether

HS - Composite HydraSleeve

HS-D - deep composite HydraSleeve sampler; set at bottom of open borehole

HS-S - shallow composite HydraSleeve sampler; set at ½ of open borehole

J - Indicates an estimated value

MTBE - methyl tertiary butyl ether

NA - Not analyzed

ND(5.0) - Not detected at or above the laboratory reporting limit, laboratory reporting limit included.

NS - Not sampled

PW - Inactive supply well being used as a monitoring/sampling location

TAME - tert-amyl methyl ether

TBA - tert butyl alcohol

Subject: Inactive Exxon Facility 28077 / Phoenix, MD: Interim Cycling of Remaining GW Recovery Wells
Attachments: 28077 RW adjustments Jan 2023.pdf; Table 1 Rebound Round 10 1_4.xlsx

Hi Drew.

Again, thanks for providing us time last Thursday to review with the MDE the 2022 cycling assessment results and present the forthcoming workplan action items. We are drafting both a Cycling Assessment Report of Results and Workplan to be submitted to you around the middle of the month. In the interim of preparing/submitting the report and workplan, MDE's review/response, with MDE's approval we would like to further extend the cycling assessment work.

As discussed, we are currently recovering groundwater from two intersection wells (MW-187A and MW-187C) and MW-178C (3501 Hampshire Glen) – see attached figure (yellow and pink circles). As mentioned, we would like to continue the cycling assessment within the reduced area of remaining impacted wells, including the following adjustments:

- add recovery pumps to MW-54B and MW-38C (both on the 14307 Jarrettsville Pike property) (see green circles)
- remove the pump from MW-178C (pink) and convert to an immediate downgradient (from active recovery) monitoring point
- cycle the four RWs ON for one month and OFF for one month twice
- collect monthly groundwater samples from the following wells (listed in progressive downgradient order) - MW-187A, MW-187B, MW-187C, MW-54B, MW-38C, MW-178C; sample other wells are currently directed by MDE
- provide the MDE monthly updates (figure, summary table, analytical reports) via email
- review cycling results by conference call with MDE shortly after the second OFF cycle

Please find attached the cycling assessment Round 10 analytical data summary. Please advise if you'd like additional data, other information, or want to have a call to discuss/review/answer questions, etc.

Again, we would like to make best technical use of time over the next couple months and gather additional meaningful cycling data.

Thanks.

Mark J. Schaaf, CPG

External Email

John and Mark,

The Department has reviewed your proposed plan for continued cycling of select recovery pumps for an additional two monthly cycles. The proposed plan will include:

- Operation of pumps in wells MW-38C, MW-54B, MW-187A, and MW-187C
- Cycling the four wells to pump for a period of one month on, one month off, one month on, and then one month off.
- Monthly sampling from select wells MW-187A, MW-187B, MW-187C, MW-54B, MW-38C, MW-178C;
- Continued sampling of all other wells at the frequency currently required;
- Provide MDE with monthly updates (figure, summary table, analytical reports) via email; and
- Review cycling results by conference call with MDE shortly after the second OFF cycle.

The Department approves the proposed plan with the following requirements:

- The first month of the continued cycling program will be considered to begin following completion of the removal of the pump in MW-178C and the installation and activation of pumps in wells MW-38C and MW-54B. Provide written notification via email to MDE to document the commencement date of the additional cycling time period;
- Following the second "off" cycle, reactivate all four pumping wells and continue pumping until sampling results are received, reviewed, and a determination made by MDE regarding future pumping.
- The sampling frequency for wells, other than those specifically listed above, must conform with the frequencies included on the summary table provided to MDE on behalf of ExxonMobil via email on January 18, 2023 (attached). Please note that MW-109 is currently required to be sampled on a quarterly basis but is not listed on the table. Well PW-3501 must also be sampled on a quarterly basis and should be added to the table.

Feel free to contact me or Ellen Jackson if you have any questions or concerns.

Thanks!
Drew Miller

We are drafting both a Cycling Assessment Report of Results and Workplan to be submitted to you around the middle of the month. In the interim of preparing/submitting the report and workplan, MDE's review/response, with MDE's approval we would like to further extend the cycling assessment work.

As discussed, we are currently recovering groundwater from two intersection wells (MW-187A and MW-187C) and MW-178C (3501 Hampshire Glen) – see attached figure (yellow and pink circles). As mentioned, we would like to continue the cycling assessment within the reduced area of remaining impacted wells, including the following adjustments:

- add recovery pumps to MW-54B and MW-38C (both on the 14307 Jarrettsville Pike property) (see green circles)
- remove the pump from MW-178C (pink) and convert to an immediate downgradient (from active recovery) monitoring point
- cycle the four RWs ON for one month and OFF for one month twice
- collect monthly groundwater samples from the following wells (listed in progressive downgradient order) - MW-187A, MW-187B, MW-187C, MW-54B, MW-38C, MW-178C; sample other wells are currently directed by MDE
- provide the MDE monthly updates (figure, summary table, analytical reports) via email
- review cycling results by conference call with MDE shortly after the second OFF cycle

Please find attached the cycling assessment Round 10 analytical data summary. Please advise if you'd like additional data, other information, or want to have a call to discuss/review/answer questions, etc.

Again, we would like to make best technical use of time over the next couple months and gather additional meaningful cycling data.

Thanks.

) fbg, 120-125 fbg, 151-156 fbg, 190-200 fbg, 217-222 fbg, 250-255

3 fbg, 332-337 fbg, 379-384 fbg).

FLUTE liners were installed into the following wells:

- MW-41C (sample ports at 75-80 fbg, 95-97 fbg, 120-130 fbg, 190-195 fbg)

- MW-53C (sample ports at 215-220 fbg and 225-235 fbg)

- MW-56C (sample ports at 100-110 fbg, 310-315 fbg, 320-325 fbg)

- MW-78C (sample port at 60-70 fbg). FLUTE liner was removed on September 21, 2015

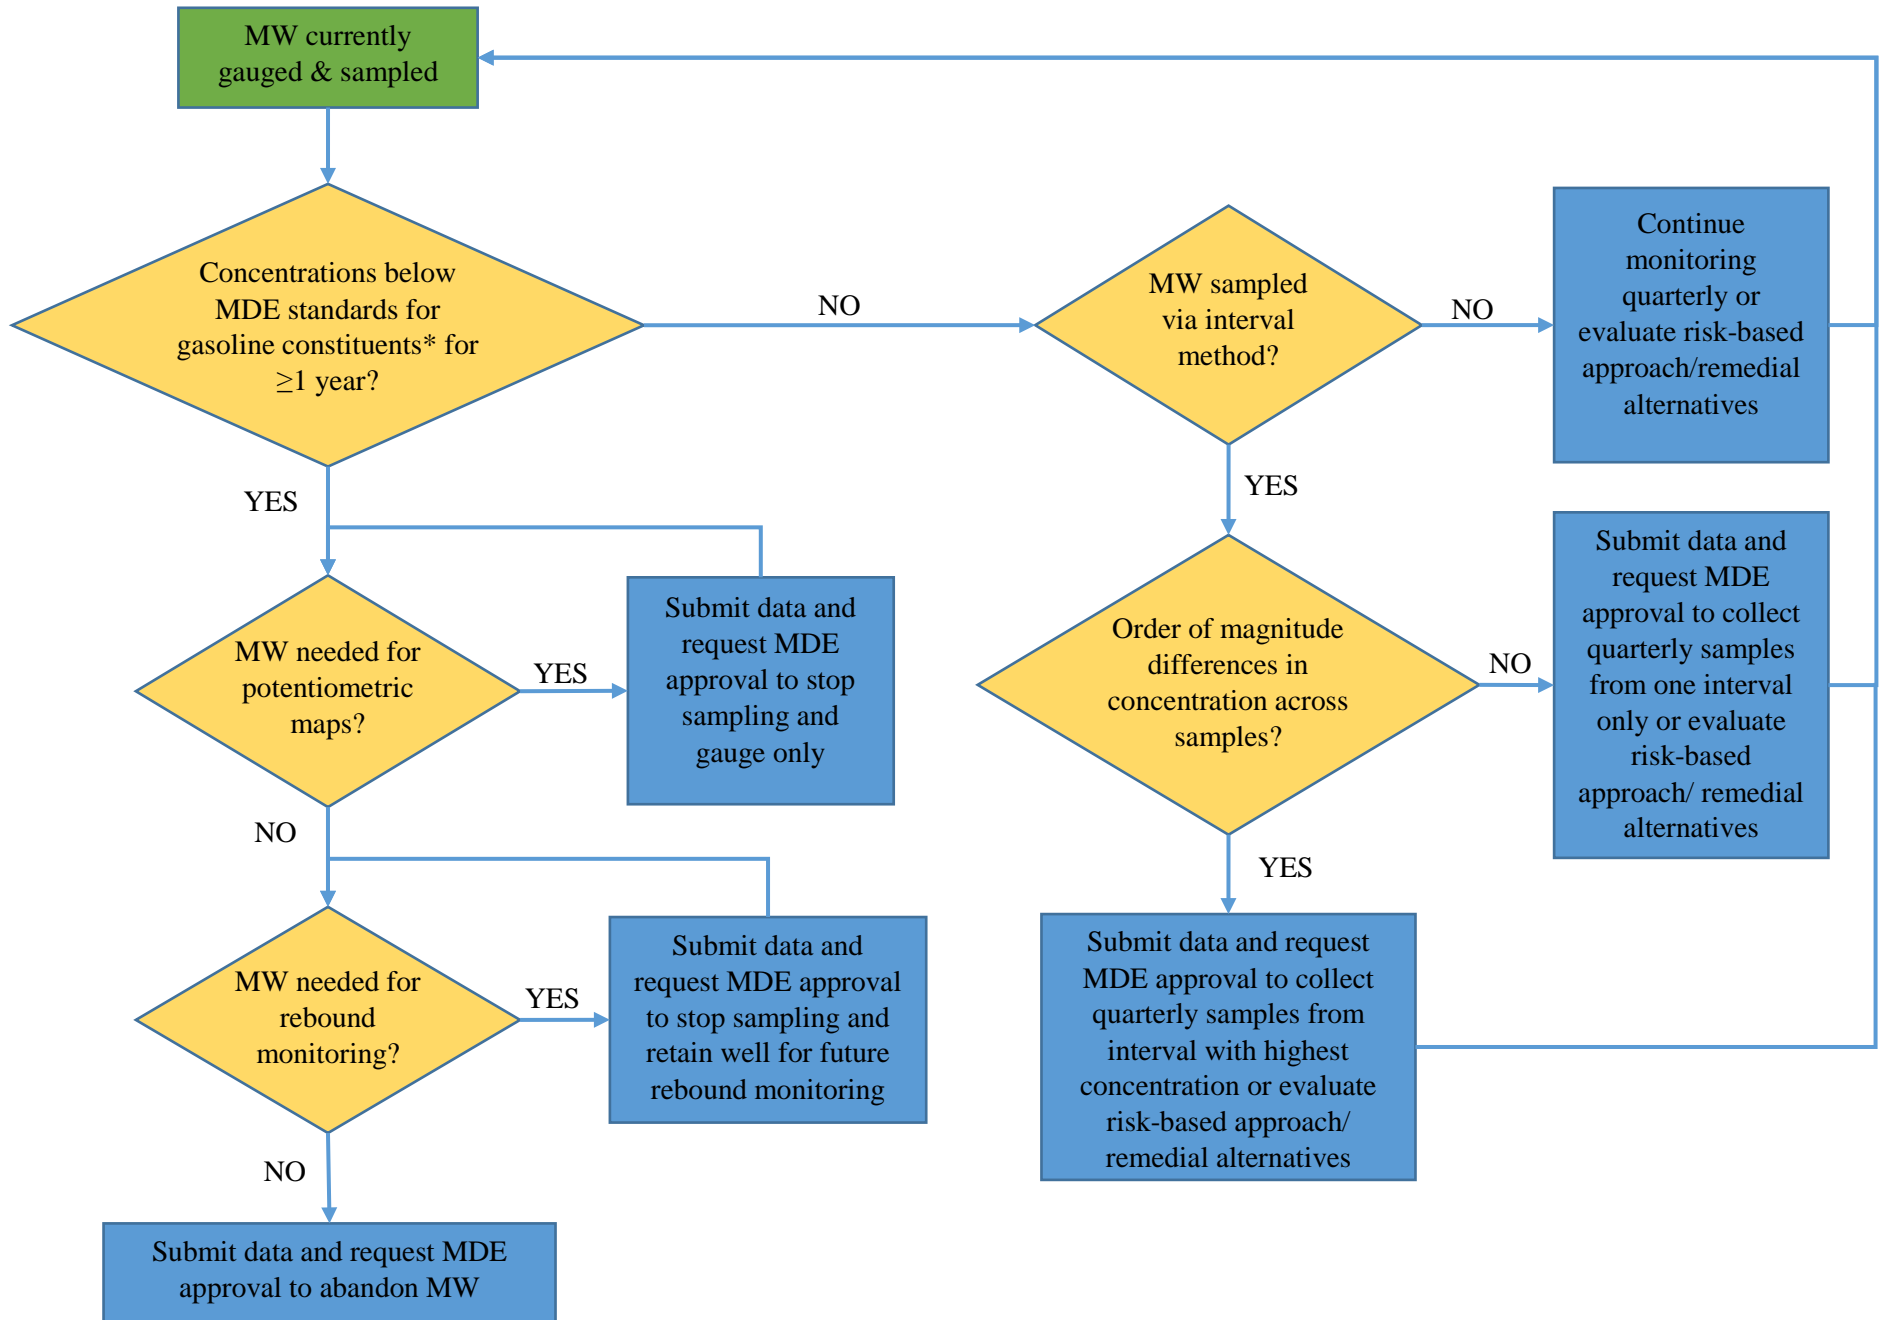

ATTACHMENT C
JUNE 2018 ORDER OF RESOLUTION FLOWCHARTS

Flowchart 2 Discontinuation of Sampling/Gauging and Abandonment of a Monitoring Well

Effective January 1, 2018

The process described in paragraph 8 of the Order of Resolution dated June 6, 2018 and the flow charts referenced herein are the product of the agreed upon resolution of a dispute between MDE and ExxonMobil are not to be considered precedent or MDE policy for other sites or other circumstances.

Flowchart 2: Monitoring Well (MW) Sampling and Abandonment

*MDE, June 2008, State of Maryland Department of the Environment, Cleanup Standards for Soil and Groundwater, Interim Final Guidance, Update No. 2.1

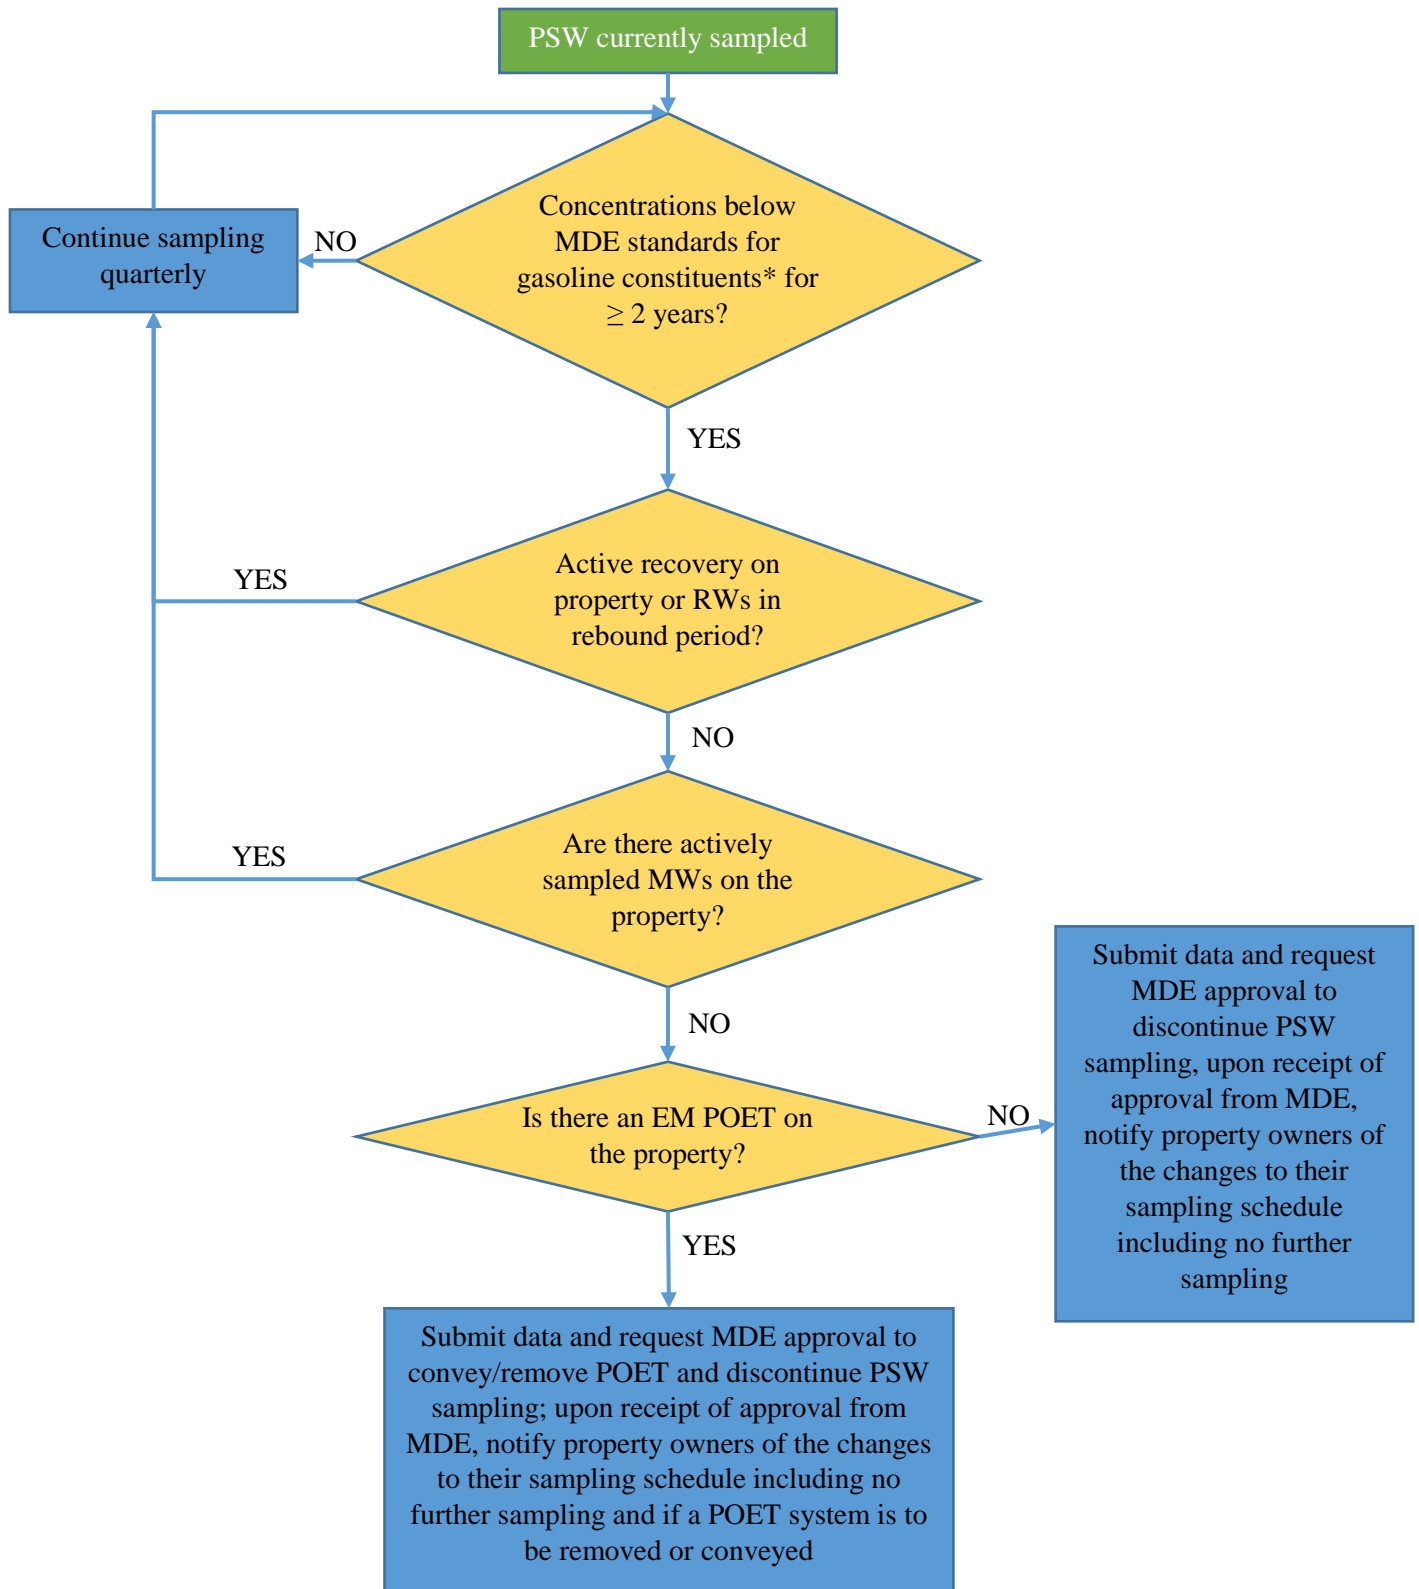

Flowchart 3

Discontinuation of Private Supply Well Sampling

Effective January 1, 2018

The process described in paragraph 8 of the Order of Resolution dated June 6, 2018 and the flow charts referenced herein are the product of the agreed upon resolution of a dispute between MDE and ExxonMobil are not to be considered precedent or MDE policy for other sites or other circumstances.

Flowchart 3: Private Supply Well (PSW) Sampling

*MDE, June 2008, State of Maryland Department of the Environment, Cleanup Standards for Soil and Groundwater, Interim Final Guidance, Update No. 2.1
