¹ MD0021199 Blue Plains: To date, EPA Region III has resolved the loading issue for Nitrogen related to the Blue Plains discharge permit and the transfer of an equivalent of 6.0 mgd of TN loading to WSSC’s Seneca plant in Maryland is reflected in the Blue Plains and Seneca latest issued permits. Furthermore, Nitrogen and Phosphorus loads equivalent to 6.0 mgd ENR effluent have been transferred to Seneca under an EPA approved NPDES permit for Seneca. However, because Blue Plains will retain the flow capacity of 169.6 mgd associated with the WSSC/MD flow allocation under the understanding that WSSC will offset any resulting loading if they use any of the 6.0 mgd of reserved flow capacity, this fact should be further noted by EPA Bay Program and WASA with regard to the design flow listed in the Blue Plains permit. As to Phosphorus, EPA’s Chesapeake Bay Program will coordinate with EPA Region III/WASA/MDE to further clarify any remaining questions regarding the distribution of phosphorous load allocations between Blue Plains and Seneca WWTPs. Finally, MDE will work with EPA to clarify the 0.1 mgd flow issue at Blue Plains because this 0.1 mgd is from a federal facility.

² MD0021491 Seneca WWTP: see footnote #1

SIGNIFICANT MUNICIPAL - FEDERAL	USDA EAST-SIDE WWTP	MD0020842	PRINCE GEORGES	INDIVIDUAL

¹ MD0023523 US Naval Academy WWTP: The TN and TP Chesapeake Bay TMDL WLA for this facility are initially allocated as 12,182 lb/yr and 914 lb/yr, respectively. During the renewal process of the current discharge permit (07-DP-2535), MDE and NSA Annapolis WWTP negotiated and agreed to a lower permitted flow of 0.7 MGD instead of the 1.0 MGD design capacity. As part of the agreement, the Chesapeake Bay TMDL TN and TP WLA, which were based on the 2004 Tributary Strategy were reduced by 30% to TN = 8,527 lb/yr and TP = 640 lb/yr. The State is retaining custody of the difference between the permitted allocation and the Chesapeake Bay TMDL allocation for future use determination.

¹ Insignificant (minor) dischargers, selected for upgrades, will be assigned wasteload allocations (WLA) of no more than 6,100 pounds per year total nitrogen and no more than 457 pounds per year total phosphorus. Tributary Strategy allocated loads in excess of 6,100 pounds per year total nitrogen and 457 pounds per year total phosphorus will revert back to the State. Expanding facilities would have to comply with all local, state and federal environmental laws, regulations and programs.

¹ Nutrient or sediment information is not available for every NPDES permittee in Maryland's Chesapeake Bay watershed who was discharging under a permit at the time EPA established the Chesapeake Bay TMDL. To the extent that such discharges were occurring during the model calibration process, they were indirectly included in the results and therefore assumed to be included in the total load assigned in the TMDL. However, due to lack of specific information, the majority of these discharges have been assigned wasteload allocations in the watershed model input decks based on default assumptions regarding flow and concentrations, where available. These facilities should provide, at a minimum, nutrient and/or TSS monitoring data with their next NPDES permit renewal application. Renewed NPDES permits for these discharges may require monitoring to verify existing loads or to (1) verify that these loads do not contribute to any exceedance of the WLAs (determination of no reasonable potential to contribute to an exceedance of local WQS and/or Bay TMDL WLA). Appropriate permit requirements consistent with the local WQS and /or Bay TMDL WLA (where monitoring data shows reasonable potential to contribute to an exceedance of local WQS and/or Bay TMDL WLA) will also be imposed at that time. As a result, Maryland may include more specific information on these facilities in future Phases of its WIP that may be used to initiate modifications to the TMDL wasteload allocations.

² MD_MININDRES: The statewide industrial reserve allocation is part of the insignificant industrial statewide aggregate allocation. Pending the outcome of additional reduction targets, this reserve allocation is potentially applicable only for existing discharges that did not previously receive an allocation representative of their discharge after appropriate reduction efforts, and/or for other new entities with a demonstrated commitment to green practices.

³ MD0053431 Closed Facility: previously associated with GST Autoleather. Load may be allocated to Conococheague WWTP (MD0063509, Significant Municipal) upon permit renewal in accordance with Washington County water and sewer plan. In the interim, the allocation is listed in the minor industrial loadings as the previous industrial facility is no longer operating and no longer holds an NPDES permit.

¹ The geographic coordinates for the facility are incorrect. Therefore, the specific county the facility is located in could not be determined. The facility is identified as being located within the Aberdeen Proving Ground Maryland 8-Digit watershed though, which means the specific facility is probably located in either Baltimore or Harford Counties. Correct geographic coordinates will need to be obtained to determine the exact county the facility is located within.

INDUSTRIAL STORMWATER	WSSC - WESTERN BRANCH WWTP	02SW0121	INDETERMINATE ²	AGGREGATE

¹ The industrial stormwater permit is a general discharge permit. Therefore, all of the facilities have the same NPDES number, and the MDE permit number, which varies per facility, is included in this table rather than the NPDES number.

² The geographic coordinates for these facilities are incorrect. Therefore, the specific county the facility is located in could not be determined. The facilities have still been identified as being located in the Chesapeake Bay watershed via the Maryland 8-Digit watershed specified within their permit. Correct geographic coordinates will need to be obtained to determine the exact county these facilities are located within.

¹ There is significant yearly turn-over in the mineral mine permits, due to the nature of extractive activities. While many of these permits are for sand/gravel pits, which are more or less permanent in nature, the remainder of the permits are for one time extractive activities. Therefore, while regulated for stormwater discharges, many of the permits are missing actual NPDES numbers. Thus, The MDE – LMA identification number is included in this table as an identifier rather than the NPDES number.

COAL MINES	DM101	MD0055182	METTIKI COAL, LLC	METTIKI COAL LLC	GARRETT	AGGREGATE

Section XVII: Stormwater Permits - Coal Mines

SECTOR	MDE BOM PERMIT ¹	NPDES	FACILITY NAME	FACILITY OPERATOR	COUNTY	WLA
COAL MINES	DM109	MDG852173	WOLF RUN MINING COMPANY - STEYER DEEP MINE	PATRIOT MINING	GARRETT	AGGREGATE
COAL MINES	DM111			GEORGE CREEK, INC	GARRETT	AGGREGATE
COAL MINES	DM112	MD0068811	BACKBONE MOUNTAIN, LLC - MINE #1	BACKBONE MOUNTAIN, LLC	GARRETT	AGGREGATE
COAL MINES	SC104	MDG851353	BUFFALO COAL COMPANY, INC. - MINE NO.5 TIPPLE	BEECHWOOD COAL LLC	ALLEGANY	AGGREGATE

¹ Some coal mines are missing NPDES numbers; however, this does not mean they are not regulated for stormwater discharges. All mining activities are regulated for stormwater discharges as per NPDES requirements. Thus, The MDE – Bureau of Mines (BOM) permit number is included in this table as an identifier in addition to the NPDES number.
