

Valid Methods List

In the following sections are tables of method codes for reference. Method codes in CMDP are gathered from each participating state's SDWIS database. Therefore, the list of method codes in the CMDP template include those that Maryland's SDWIS database will not accept. The tables provided here is a comprehensive list of method codes from CMDP that will be accepted by Maryland's SDWIS database.

The method codes are provided in two sections. The first section provides method codes that are grouped by category (microbial and chemical) and listed by their associated analyte in alphabetical order. The second section provides the unique method codes for each category.

Use either section to identify the accepted method code used by the analyzing lab. The method code may be directly copied and pasted into the CMDP Excel template.

If CMDP rejects the file due to an incompatible method code, contact the appropriate rule manager at MDE for assistance.
